

**County of Santa Clara Health System  
Antimicrobial Stewardship Program**

**Guideline # A7170-A96  
Page 1 of 8**

- I. TITLE:** **CSCHS Guidelines for the Management of COVID-19**
- II. PURPOSE:** FOR INTERNAL USE ONLY, this document covers management related to COVID-19, presenting the most robust and current data. Created and endorsed by Infectious Diseases, Pulmonary Critical Care, Hematology/oncology, and Pharmacy Departments

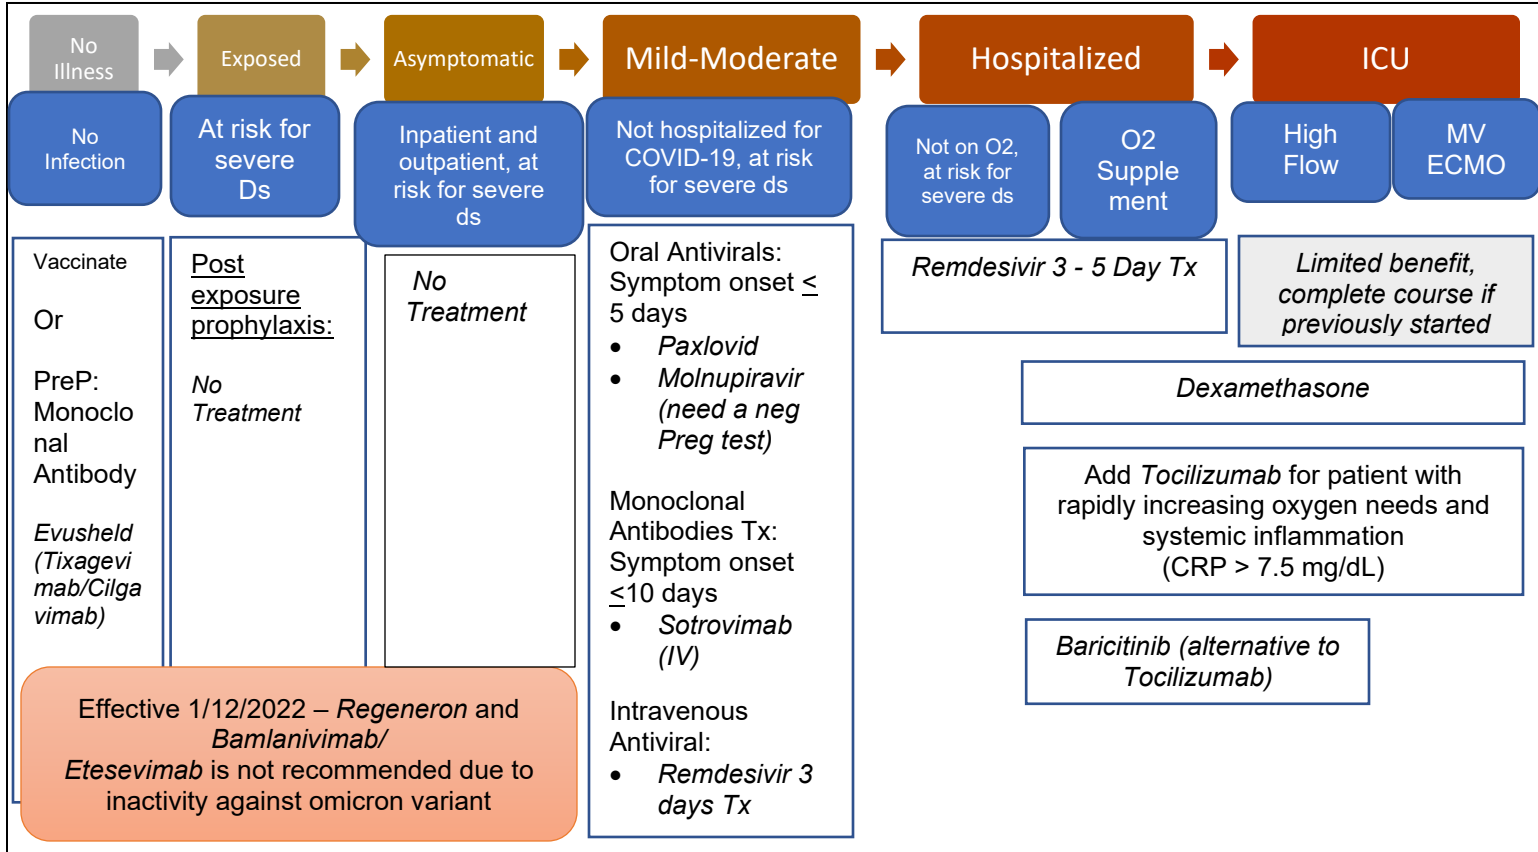

**This is a living document that will be updated frequently as new data is published. Please refer to the last updated date for the most current publication.**

**Major updates from the last version are written in green** | **Last updated: 1/14/2022**

- III. LEVEL:** Resource document, no dependence needed
- IV. SCOPE:** This guideline/procedure/protocol will pertain to the following site(s):
- Custody
  - O'Connor Hospital
  - Public Health
  - Santa Clara Valley Medical Center Hospital
  - St. Louise Regional Hospital
  - VMC Ambulatory Clinics
  - VMC Outpatient Pharmacies
- V. BACKGROUND:** This is an institutional guideline to be used as a resource in determining best practices at CSCHS to treat COVID-19.

**A. Outpatient therapies for Mild-Moderate COVID-19 and at High Risk for Severe Disease**
**Table 1: Therapeutic Options for Outpatient, Mild-Moderate COVID-19**

<b>Drug</b>	<b>Indication</b>	<b>NIH Guidelines<sup>1</sup></b>	<b>Dose</b>	<b>Notes</b>
Nirmatrelvir/ Ritonavir (Paxlovid – Pfizer)	EUA – 12/2021  Meets all the following: Age $\geq$ 12 years and weight $\geq$ 40 kg, COVID+, high risk, within 5 days of symptom onset, treatment of mild/moderate COVID	<ul style="list-style-type: none"> <li>Recommend as outpatient treatment (1st preference)</li> <li>If hospitalized after starting treatment, may complete the full 5-days course at MD's discretion.</li> <li>May be used in patients who are hospitalized for a diagnosis other than COVID-19, provided they have mild to moderate COVID-19 and are at high risk of progressing to severe disease.</li> </ul>	300/100 mg nirmatrelvir/ritonavir PO BID x5 days Renally Adjust:  eGFR $\geq$ 30 to $<$ 60 mL/min: 150/100 mg nirmatrelvir/ritonavir PO BID x5 days  eGFR $<$ 30 mL/min: not recommended	Not authorized for: <ul style="list-style-type: none"> <li>Initiation of treatment requiring hospitalization due to severe COVID</li> <li>PrEP or PEP*</li> <li>Treatment duration longer than 5 days.</li> </ul> Significant drug-drug interactions.  Antiviral activity against all coronavirus variants
Sotrovimab (GSH)	EUA – 5/2021 Age $\geq$ 12 years and weight $\geq$ 40 kg, COVID+, high risk, within 10 days of symptom onset), treatment mild/moderate COVID	Recommend as outpatient treatment (2nd preference)  If hospitalized after starting treatment, may complete the full 3-days course at MD's discretion	500 mg x1 IV infusion over 30 minutes	Expected to retain activity against Omicron variant.  Monitor for hypersensitivity reactions during and for at least 1 hour after infusion
Remdesivir (Veklury)	Remdesivir x3 days for outpatient treatment within 7 days of symptom onset for age $\geq$ 12 years and weight $\geq$ 40 kg	Recommend as outpatient treatment (3rd preference).  If hospitalized after starting treatment, may complete the full 3-days course at MD's discretion	200 mg x1 IV on day 1, then 100 mg IV daily x2 days	Expected to retain activity against Omicron. PINETREE trial showed 3-day remdesivir had 87% relative reduction in risk of hospitalization or death compared to placebo
Molnupiravir (Merck)	EUA – 12/2021  Adults $\geq$ 18 years, COVID+ testing, high risk, within 5 days of symptom onset), treatment	Recommend as outpatient treatment (4th preference)  <ul style="list-style-type: none"> <li>If hospitalized after starting treatment, may complete the full 5-days course at physician discretion.</li> </ul>	800 mg (4 x200 mg capsules) PO BID x5 days	Not authorized for: <ul style="list-style-type: none"> <li>Initiation of treatment requiring hospitalization due to severe COVID</li> <li>PrEP or PEP*</li> <li>Longer than 5 days.</li> <li>Pediatric/Pregnancy/lactating</li> </ul>

**County of Santa Clara Health System  
Antimicrobial Stewardship Program**

**Guideline # A7170-A96  
Page 4 of 8**

	mild/moderate COVID	<ul style="list-style-type: none"> <li>May be used in patients who are hospitalized for a diagnosis other than COVID-19, provided they have mild to moderate COVID-19 and are at high risk of progressing to severe disease.</li> </ul>		<p>Warning: Embryo-fetal toxicity (see EUA). Negative pregnancy test required prior to initiation.</p> <p>Broad antiviral activity against all RNA viruses</p>
Tixagevimab/ Cilgavimab (Evusheld) <sup>2</sup>	EUA for PrEP only – 12/2021  Age ≥ 12 years and weight ≥ 40 kg	Recommend for PrEP in moderate-severe immunocompromised and may not mount adequate immune response to COVID vaccines those with severe allergy COVID vaccines	tixagevimab 150mg and cilgavimab 150mg IM injection x 1	If patient received recently received COVID-19 vaccination, separate administration by 2 weeks  Medication is not a substitute for vaccinations.
Casirivimab/ Imdevimab (Regen-COV)		Unlikely to be active against Omicron		
Bamlanivimab/ Etesevimab (Lilly)		Unlikely to be active against Omicron		

**\*Abbreviations:**

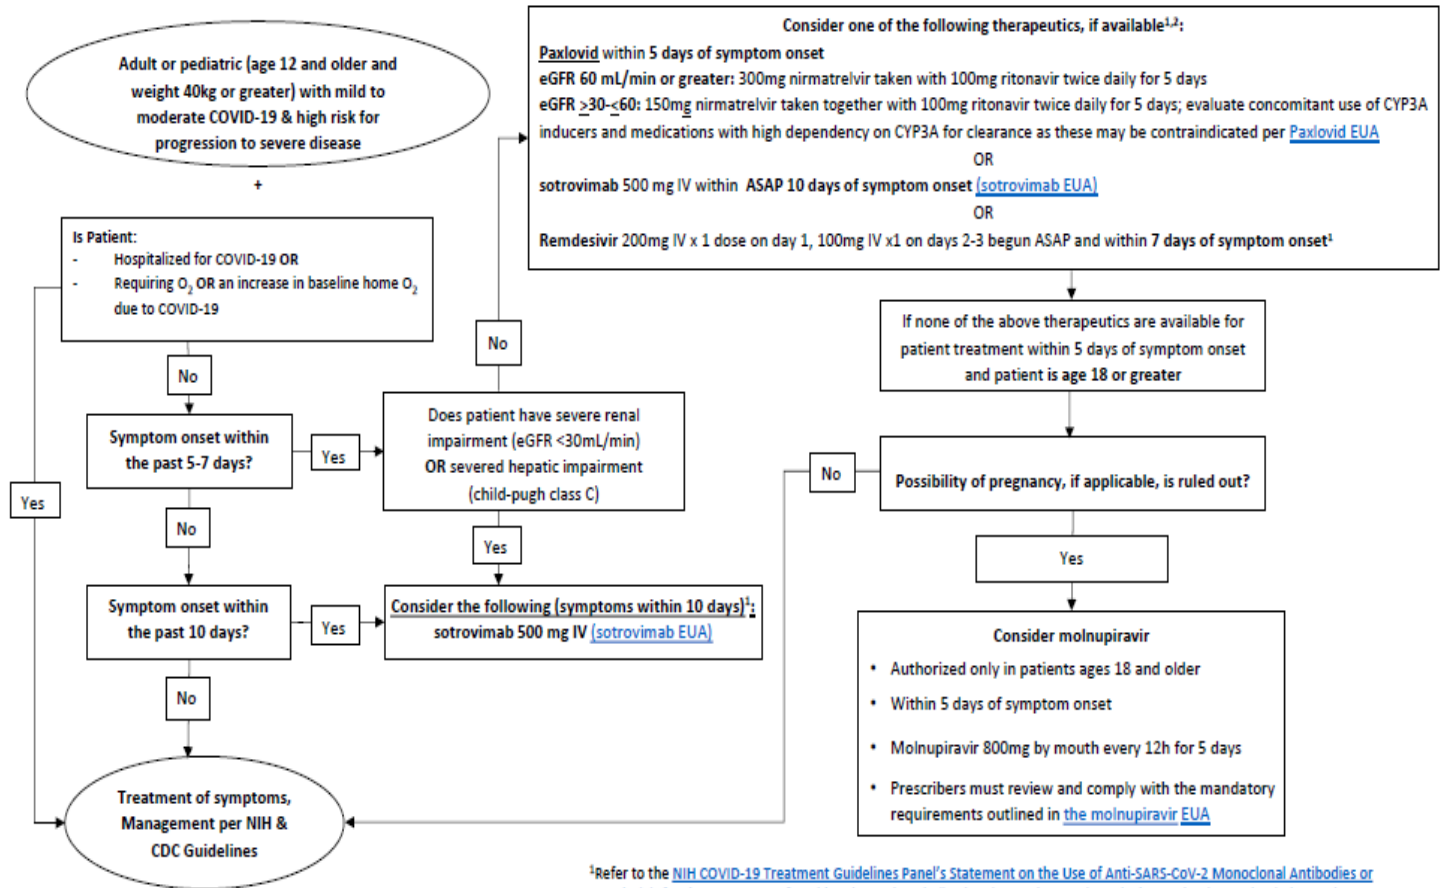

PrEP: pre-exposure prophylaxis for prevention of COVID-19

PEP: post-exposure prophylaxis for prevention of COVID-19

**County of Santa Clara Health System  
Antimicrobial Stewardship Program**

**Guideline # A7170-A96  
Page 5 of 8**

**Figure 1. Treatment algorithm for Outpatient management of COVID-19<sup>3</sup>**

*Limited use of bamlanivimab/etesevimab and REGEN-COV as they are not expected to be active against the Omicron variant<sup>1</sup>*

<sup>1</sup>Refer to the [NIH COVID-19 Treatment Guidelines Panel's Statement on the Use of Anti-SARS-CoV-2 Monoclonal Antibodies or Remdesivir for the Treatment of Covid-19 in Nonhospitalized patients when Omicron is the Predominant Circulating Variant](#); Remdesivir is only approved for hospitalized individuals with COVID-19. Outpatient treatment is based on information from the literature ([Dec 22, 2021 Early Remdesivir to Prevent Progression to Severe Covid-19 in Outpatients](#); DOI: 10.1056/NEJMoa2116846)  
<sup>2</sup> COVID-19 convalescent plasma with high titers of anti-SARS-CoV-2 antibodies is authorized for the treatment of COVID-19 in patients with immunosuppressive disease in either the outpatient or inpatient setting ([COVID-19 Convalescent Plasma EUA](#))

**County of Santa Clara Health System  
Antimicrobial Stewardship Program**

**Table 2: How to Obtain Outpatient Medications**

<b>Medication</b>	<b>Contact to Obtain Medication</b>	<b>Comments</b>
Nirmatrelvir/ Ritonavir (Paxlovid)	Pharmacy locations/telephone and inventory availability can be found: <a href="https://www.scvmc.org/patients-visitors/services/covid-19-oral-antiviral/pharmacy-location-inventory">https://www.scvmc.org/patients-visitors/services/covid-19-oral-antiviral/pharmacy-location-inventory</a>	The prescribing physician must personally call a participating VHC pharmacy to provide a verbal prescription and obtain a reservation code.  <i>https://www.fda.gov/media/155050/download</i>
Molnupiravir	Pharmacy locations/telephone and inventory availability can be found: <a href="https://www.scvmc.org/patients-visitors/services/covid-19-oral-antiviral/pharmacy-location-inventory">https://www.scvmc.org/patients-visitors/services/covid-19-oral-antiviral/pharmacy-location-inventory</a>	The prescribing physician must personally call a participating VHC pharmacy to provide a verbal prescription and obtain a reservation code.  <i>https://www.fda.gov/media/155054/download</i>
Sotrovimab	HL build and allocation of medication is in process. Once ready follow steps below:  Clinic infusion: Use Healthlink Referral for COVID-19 Monoclonal Antibody Infusion ED infusion: order available in healthlink	Fact sheet for healthcare providers: <a href="https://www.fda.gov/media/149534/download">https://www.fda.gov/media/149534/download</a>
Tixagevimab/ Cilgavimab (Evusheld)	Order available in healthlink for both inpatient and outpatient.	Fact sheet for healthcare providers: EUA for Evusheld (tixagevimab and cilgavimab).  <i>https://www.fda.gov/media/154701/download</i>
Casirivimab/ Imdevimab (Regen-COV)	<b>1/12/2022 – Usage suspended due to Omicron</b>	<a href="https://www.phe.gov/emergency/events/COVID19/investigation-MCM/Bamlanivimab-etesevimab/Pages/bamlanivimab-etesevimab-regen-cov-ordering-update.aspx">https://www.phe.gov/emergency/events/COVID19/investigation-MCM/Bamlanivimab-etesevimab/Pages/bamlanivimab-etesevimab-regen-cov-ordering-update.aspx</a>
Bamlanivimab/ Etesevimab (Lilly)	<b>1/12/2022 – Usage suspended due to Omicron</b>	<a href="https://www.phe.gov/emergency/events/COVID19/investigation-MCM/Bamlanivimab-etesevimab/Pages/bamlanivimab-etesevimab-regen-cov-ordering-update.aspx">https://www.phe.gov/emergency/events/COVID19/investigation-MCM/Bamlanivimab-etesevimab-regen-cov-ordering-update.aspx</a>

**County of Santa Clara Health System  
Antimicrobial Stewardship Program**
**B. Therapies for Hospitalized Adults with COVID-19**
**Table 3: Dosing Regimens for therapies for hospitalized adults with COVID-19**

Drug Name	Dosing Regimen	Comments
<b>Remdesivir (Hospitalized)</b>	RDV 200 mg IV x1, then 100 mg IV daily for 4 days or until hospital discharge	<ul style="list-style-type: none"> <li>If patient progresses to more severe illness, complete course of RDV</li> </ul>
<b>Remdesivir (Outpatient)</b>	RDV 200 mg IV x1, then 100 mg IV daily for 2 days	
<b>Dexamethasone</b>	DEX 6 mg IV/PO once daily for up to 10 days or until hospital discharge	<ul style="list-style-type: none"> <li>If DEX not available, an equivalent dose of another corticosteroid may be used</li> </ul>
<b>Baricitinib</b>	Dose dependent on eGFR <ul style="list-style-type: none"> <li>eGFR <math>\geq</math> 60: baricitinib 4 mg PO daily</li> <li>eGFR 30 to 59: baricitinib 2 mg PO daily</li> <li>eGFR 15 to 29: baricitinib 1 mg PO daily</li> <li>eGFR &lt; 15: NOT RECOMMENDED</li> </ul> Up to 14 days duration or until hospital discharge	<ul style="list-style-type: none"> <li></li> </ul>
<b>Tofacitinib</b>	Tofacitinib 10 mg PO BID up to 14 days or until hospital discharge <ul style="list-style-type: none"> <li>eGFR &lt;60: Tofacitinib 5 mg PO BID</li> </ul>	<ul style="list-style-type: none"> <li>Used as alternative immunomodulatory drug if baricitinib is not available or feasible to use (B1a) per NIH guidelines</li> <li>No FDA EUA for use in COVID-19</li> </ul>
<b>Tocilizumab</b>	Tocilizumab 8 mg/kg actual body weight Max: 800 mg dose Single IV infusion	<ul style="list-style-type: none"> <li>In clinical trials, a third of participants received a second dose of tocilizumab 8 hours after first dose if no clinical improvement was observed</li> <li>Currently on nationwide backorder from manufacture</li> </ul>
<b>Sarilumab</b>	Use single-dose, prefilled syringe (not the prefilled pen) for SQ injection. Reconstitute sarilumab 400 mg in 100 cc 0.9% NaCl and administer as an IV infusion over 1 hour.	<ul style="list-style-type: none"> <li>Used as alternative immunomodulatory drug if tocilizumab is not available or feasible to use (B1a) per NIH guidelines</li> <li>In the United States, the currently approved route of administration for sarilumab is SQ injection. In the REMAP-CAP trial, the SQ formulation was used to prepare the IV infusion</li> <li>No FDA EUA for use in COVID-19</li> </ul>

RDV = remdesivir, DEX = dexamethasone, eGFR = estimated glomerular filtration rate, IV = intravenous, PO = oral, SQ = subcutaneous

**DEVELOPMENT & APPROVAL OF THE GUIDELINE/PROCEDURE/PROTOCOL**

- a. The document is intended to provide information on the drugs currently used for COVID-19 and relevant literature and data regarding use of these agents when considering pharmacotherapy management.
- b. Review will be ongoing during this announced pandemic and then follow regular updates.
